dun 🗞 bradstreet

As part of our Women in Business report, we analysed data on 17 different countries and looked in detail at what developments have been seen for women in management within the last five years. Here you can find the country-specific, detailed findings.

How has the number of women in leadership positions changed?

The overview displays the percentage changes in male to female management ratios over recent years.

Overall, Finland has seen a 0,1% increase in women in leadership positions across all distributions since 2018.

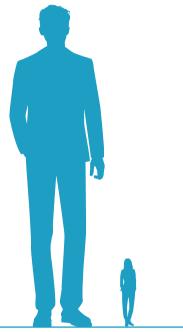

69,4%

How companies with a majority of women in leadership perform in the ESG ranking

Environmental, Social and Governance – ESG – is more important than ever. How much value do

Which companies were financially 5 more successful last year?

In 2022, a lot of companies were struggling. But how have the companies performed?

The development of revenues in 2022 was analysed for companies with a majority of female managers in contrast to male-dominated management. The picture is balanced for the most part.

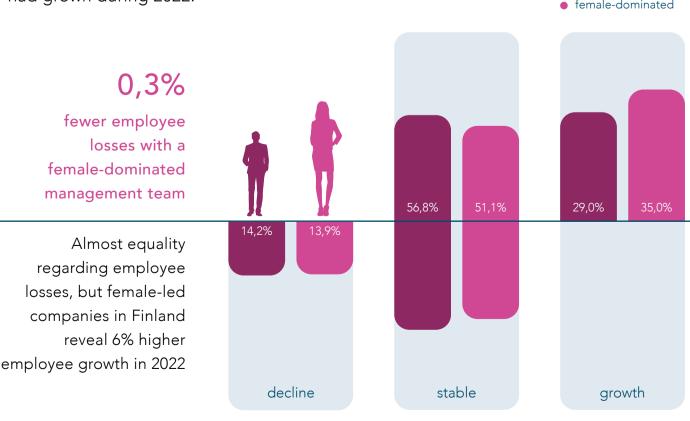

A clear dominance is not discernible for 2022. Male-led businesses recorded a slightly higher revenue decrease, while female-led companies lag behind male-led companies regarding revenue growth, but being more stable.

6 Which companies have seen employee growth?

Companies with a female-dominated or maledominated management were analysed, this time considering their employee base and whether it had grown during 2022.

male-dominated female-dominated

Methodology

Within the report "Women in Business 2022", we have only analysed companies that show management positions within our database and therefore indicate a management level. For this reason, microbusinesses were excluded from the analysis.

The dataset for Finland includes 28.452 companies that meet these criteria. In the further analyses, both the percentage of women within these management positions were analysed over the period from 2018 to 2022 inclusive, as well as various aspects with regard to whether management is majority female (proportion of 51-100%) or majority male (proportion 0-50%).
