

## Environmental Policy Statement

Dun & Bradstreet Holdings, Inc. (the “Company” or “D&B”) has adopted this policy statement, which lays out the Company’s approach to embracing environmental stewardship and sustainability. This policy statement applies to all D&B employees (“team members”), and it is approved by senior management and the Audit Committee of our Board of Directors.

Additionally, the Audit Committee is responsible for overseeing policies and practices related to environmental risk, among other things. More information on the Board’s role in managing environmental risk can be found in the [Audit Committee Charter](#).

At D&B, we use our data and analytics to help companies grow their business and become better global corporate citizens. Our ideal is to create a triple bottom line—one in which our data and people are driving positive change across the globe for the planet and its people, as well as financial success.

Additional information regarding our policies can be found in our [Code of Conduct](#), [Code of Ethics](#) and [Partner Code of Conduct](#).

## Environmental Protection

As we strive to be responsible corporate citizens, we are committed to doing our part to protect the environment and minimize our impact on the natural world. Specifically, we are committed to the following:

- Complying with applicable environmental laws and regulations wherever we do business
- Engaging with suppliers and vendors that use progressive and environmentally friendly products, materials and technology to advance sustainability across the organization
- Adopting internal policies and best practices that—when combined with technology—enhance our energy efficiency and management, and resource conservation efforts
- Creating healthy workplaces that embrace published sustainability guidelines and promote recycling and responsible consumption
- Fostering a global workforce aligned with our corporate sustainability efforts and engaged in environmental projects and issues in their local areas
- Setting and monitoring the progress of our sustainability efforts through the collection of key data and establishment of corporate objectives
- Exploring opportunities to save energy, water and resources; generate less waste; and consume fewer natural resources
- Taking actions to ensure team members are not engaging in excessive or unnecessary work travel

We are continuously taking steps toward these goals and commitments, and we will share updates or additional information as needed.

## **Climate Change**

Climate change is one of the most important challenges of our time. We recognize greenhouse gas emissions are causing climate change and through our operations, we contribute to those emissions. Consequently, we are working to reduce our climate impact and to drive the creation of a more sustainable and greener economy.

Due to the nature of our work, business continuity is of the utmost importance. As climate change impacts become more intense and frequent, we understand the risks that climate change can pose to our business and are working to integrate those risks into our business continuity and disaster recovery planning.

## **Data Centers**

We take environmental impacts into consideration as we continue to expand our global footprint. As our data centers are an energy-intensive aspect of our operations, we are prioritizing the use of energy-efficient facilities and seeking cooperation with our data center vendors to monitor, influence and support any efforts towards sourcing renewable energy for the facilities. We are continuing to transition to a multi-cloud solution to reduce our overall data center footprint.

This prioritization will allow us to grow as a company in a more efficient and sustainable way, while simultaneously underscoring our push toward a more sustainable economy.

## **End-of-Life Programs**

An additional environmental impact resulting from our business activities is the production of electronic waste. That is why in both our offices and our data centers, we have developed end-of-life programs for our e-waste. All hard drives and other devices that store data are erased and recycled in a safe, responsible and efficient manner. These programs will ensure that the materials in our electronic ecosystem are managed and disposed responsibly.
